komplexen) [1960] 18 p. 86 refs.
Order from SLA int \$2.40, rh \$3.30 61-10635

Trans. of Z[eitschrift für Electrochemie] (West
Germany) 1959, v. 63 [no. 1] p. 6-12.

The ionization energy of molecules which have elec-
tron donor properties is determinable from the energy
of an intermolecular electron band, for example
with trinitro benzene, chloranil, or iodine as acceptor.
This method is applied for the calculation of the ion-
ization energy of condensed aromatic hydrocarbons,
diphenylpolyenes, N-substituted anilines and other
aromatic amines. It is particularly applicable in
cases where the hitherto known experimental proce-
dures are not suitable. (Author)
